A Day (part 6)

I returned from lunch. The crack fixers, in their overzealousness in laying plaster, had plastered and painted the cracks around my door while I was gone.

"It looks very nice," I commented to a worker who was plastering at a high velocity.

He beamed.

"What did you do with the doorknob?" I asked.

He stopped beaming. "I'd hoped no one would notice." He replied sullenly, and handed me my doorknob.

By now my roommate had arrived, and was standing in the middle of the hall, staring somewhat open-mouthed at the wall where the door had been. I walked up, stuck the doorknob in the wall and pulled it open. Roommate's mouth widened to maximum angle. I plopped his flight cap on his head and told him it was MINTIM (min. time) to class, whereupon he began moving eastward, still looking back at the door.

"Good afternoon, gentlemen," announced our instructor. "Every equation in this course can be derived from F equals MA ." This disturbed me somewhat, since I was in Psychology 302. Then, looking in my direction, he said, "Tell us about today's lesson."

"Sir, it was divided into three sections; initial, subsequent, and final."

"Good," he replied. I had remembered he was also an MT instructor.

Leaving Psychology behind, we journeyed into the smoke-filled inner sanctum presided over by the Law Dept. Today's feature was "United States v. Bubbles (No. 38:22:36) USCA (1962)." We held a mock trial; United States lost.

Classes over-- time for intramurders. Our AOC says he doesn't want to over-emphasize intramurals, but if we lose he shaves our heads.

We hiked out to the rugby field. As the other team approached, I turned to the coach and said, "They're a little bigger than we are, Sonny."

"Don't worry," he replied, "we'll beat them with our secret play."

The whistle blew. I got the ball, so I started running. I was cut off from the front. I was cut off from the sides. It looked bad.

"Now?" I yelled to Sonny.
"Not yet."

They got closer and closer--I could see the red of their eyes.

"Now?" I yelled again.
"Now!"

I whipped out the latest copy of the Dodo and threw it down in front of me. It worked; I nimbly stepped over the mass of struggling, screaming bodies which were scrambling for a sextion of the cadet's favorite magazine....

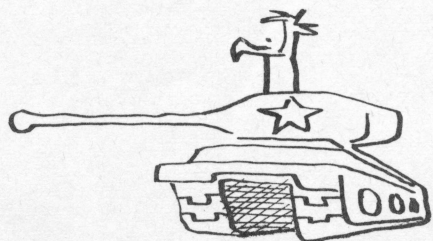

DODOS and CHICKS

Miss Lightly Starten presently lives in Germany. She lives with her father who is in the Army.

She and a member of the class of 62 plan to get married upon his graduation.

In her spare time Lightly works as a professional model. The next time you open a fashion magazine she might greet you again.

MATCH THE DEPARTMENT WITH THEIR QUIZ by FMR

In the figure shown, neglect the friction due to tail of kite. The kite has an upward velocity of 1.5868463×10^{-6} inches/year. The boy is running with a constant acceleration of 2 ft/min^2 . The k of the spring in the string leading to the kite is 2.34. The boy is holding a spool of string, which is playing out at a constant velocity of 1.223234×10^{345} angstroms/decade. The kite weighs 2.45 stone. The wind is blowing at .234 meters/sec, in a direction of a slope of 4 on 3.345 to the line of flight of the kite. The year is 25 March, 1545 (Julian calander). The angular velocity of the earth is 54586857475686857 rad/sec. The angular velocity of the moon is 495867575 rad/hour. Find the velocity of the kite relative to the Great Crater (19 degrees NW: 47 degrees SW) on the moon, if the moon is considered to be weightless (Consider also that the boy has one wooden leg of density .234455345 pig's feet/ cubic cubit).

According to Professor Finkus' lecture on 28 Mar 45, the GNP will increase directly diametrically opposite to the gap, if the FED sells two-hundred Mickey Mouse club buttons, and the velocity of coke caps is relative to the re-enlistment rate of the Tasmanian Balloon Corps' cripples. The rate of exchange is declining with 2.1 ft/sec according to a curve, and moral suasion is not used by the Kremlin.

What will be the rate of descent of the GNP of the Balloon Corps?

- There is no Tasmanian Balloon Corps, according to Prof. Finkus.
- The question of the TBC is not to be considered in the light of the decrease of the

- rate of the Club buttons, but in a ratio to the rate of the increase of the enlightenment of the Indian native in the year of 1923. (Refer to Stat Appendix vol. 7)
- All of the above.
- None of the above except for g.

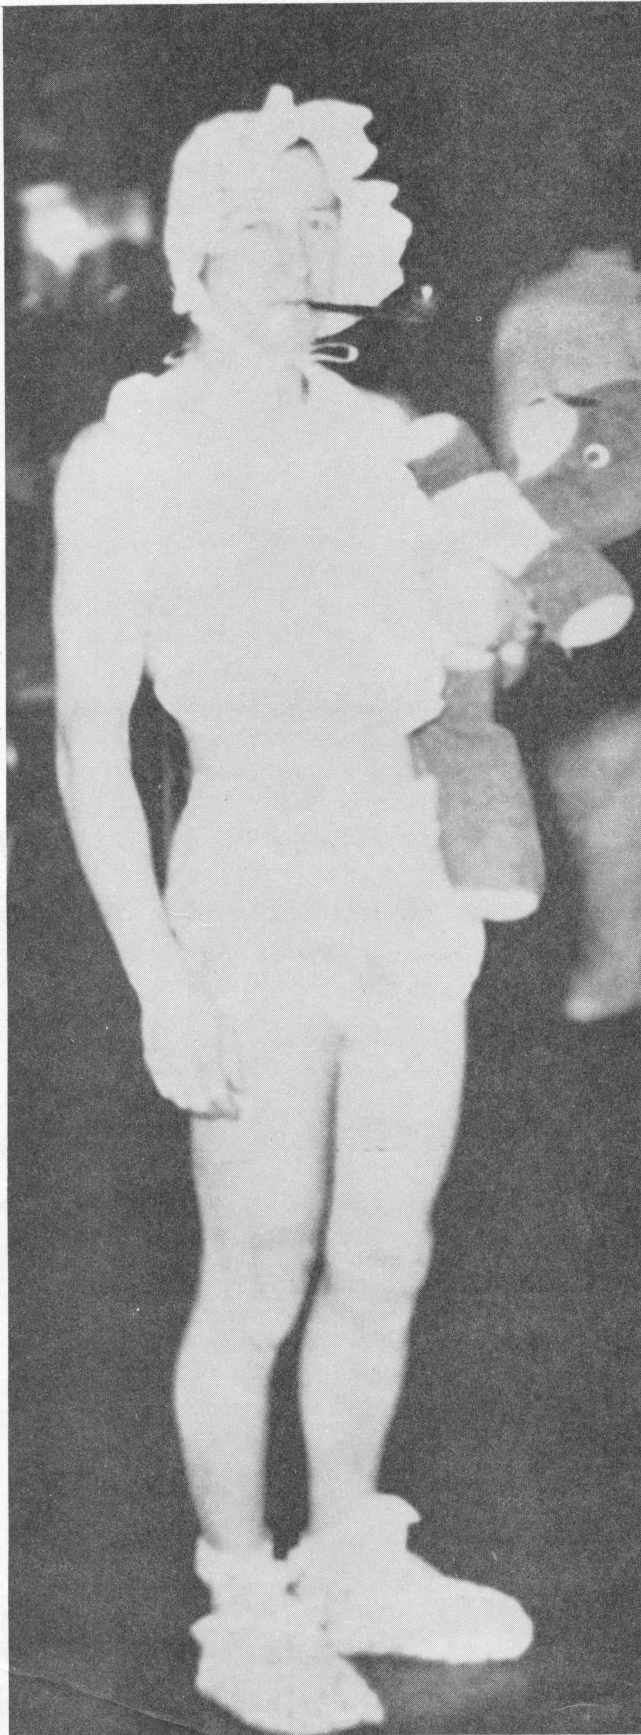

President Furdis of IONISIIISVILLE, SAF recently upped the requirement for Ground Hogs in the Royal ARAERAF to:

- 2.4/ cubic centimeter.
- 4.8/ cubic inch.
- 3.22/ cubic trash can.
- none of the above.
- all of the above including d.

In light of your studies on lesson 45. Evaluate the action of Lieutenant Dingbat with respect of the Fog Factor, if communication was at a Zenith. Make sure that your answer includes his position relative to Col. Farturs and Sgt. Smith's wife, also all other factors discussed in the course. Words are limited to not more than 6 and not less than 456.

If Exanthuus were μ in disguise what do you think the results would have been upon his meeting the Royal Croation Army on the shores of Wertiteyttuus, and if the Croation Army had not defied the Gods by burning 5 000 bottles of Besata's Vodka in the war against Yertierieius, and the Wife of Bathless had been present along with Lady Gadiavea (Whose head was shaven at the time)? Include quotes to verify your argument from memory.

PROFESSIONAL QUIZ

1. What 21st squadron AOC was recently voted the best dressed Major in the COMM Shop?(See picture)
2. What major AF record was recently set by Lieutenant Horance P. Furd?
3. Cape Canaveral recently launched:
 - a. a dud.
 - b. An ICBM.
 - c. One frightened chimpanzee.
4. In recent exercises, AF interceptors shot down:
 - a. a simulated enemy bomber.
 - b. each other
 - c. a formation of mallard ducks.
5. What AF aircraft was able to remain above 10,000 feet for six days without refueling?
6. What AF aircraft holds the record for short distance?
7. What AF officer was successful in opening his parachute just 75 feet above the ground?
8. What AF command recently purchased 8 million chickens?

ANSWERS: 1. We feel that his identity should remain a secret. 2. Three 5ths of vodka, 2 5ths of rum, one quart of tonic, and two dozen olives, 8 min, 14 sec, flat. 3. a, an incandescent burning missile. 4. c. 5. a t-33 which made an emergency landing on Pikes Peak. 6. A U3-A was able to cover the distance between the Travis O Club and a pool party at Hamilton in 3 min, 35 sec. 7. Capt. Bernie Q. Schwartzheimer (however he was not wearing the chute at the time) 8. Probably USAFA.

BALDACHI INTERVIEWED

We were fortunate to corner one of our reporters of much fame for a personal interview. Of course, there was some slight trouble convincing Nino that his homework could wait, even if it was Saturday night. So below, for the first time, we get the straight word from Nino Baldachi.

Question: "Nino, we have often wondered about your name. Is there anything that it means?"

Nino: "Well, I'm glad you asked me that. You see, my parents were of Italian descent, and when I first built my first airplane, the Baldachi Bomber, there were cries of "It will never fly.", which in Italian is "Nino Baldachi."

Question: "How did you become a cadet at USAFA?"

Nino: "Well, it didn't fly, the bomber that is, so I fled to the US to escape persecution. I wanted to hide among a group in which everyone looked like everyone else, so here I am."

Question: "What do you think of the Academy?"

Nino: "I find it most enjoyable. I have run through five slide rules, 400 green pencils, and eight pairs of shoes already. However, what I think is the most fun, is taking quizzes for no grade. Since I am not a cadet, they don't know who I am. I have been turned back four times. I love to sign up for skiing in every squadron and on all of the missing meals lists."

Question: "Nino, it has often been said that most of the activities that go on around here originate in your name. Is this true?"

Nino: "In actual life I have very little time for practical jokes. I am kept very

busy painting signs on the Super Sheds, running up the OC's trousers, and various other little tasks. NO, definitely, NO! I don't believe in practical jokes. I am against anything that might lead to trouble and confusion."

Question: "Nino, what do you think of the lectures?"

Nino: "I don't believe that I understand you."

Question: "Do you find them enjoyable?"

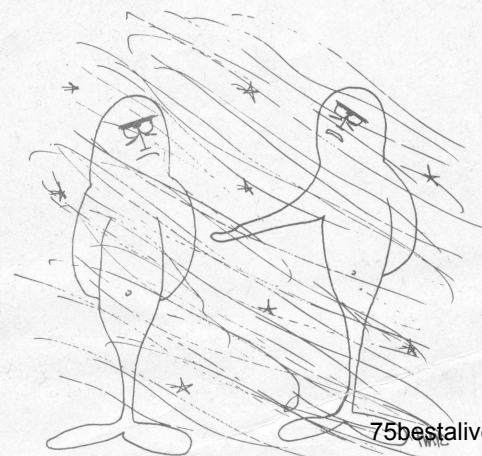

Nino: "Ah, yes, most enjoyable. I find that I can get off most of my back correspondence during that period. They are very relaxing and refreshing. It's a chance to catch up."

Question: "What do you plan to do after graduation?"

Nino: "Well, I hadn't really thought about that. I like it here so much, You know, regular meals, no decisions to make, everyone the same, a friendly atmosphere extra activities, and plenty of quizzes. Any way my eyes are very bad now and I don't think the Italian Air Force would want me anyway. No, I'm going to stay here, it's a good life, security, high pay, and lots of sleep."

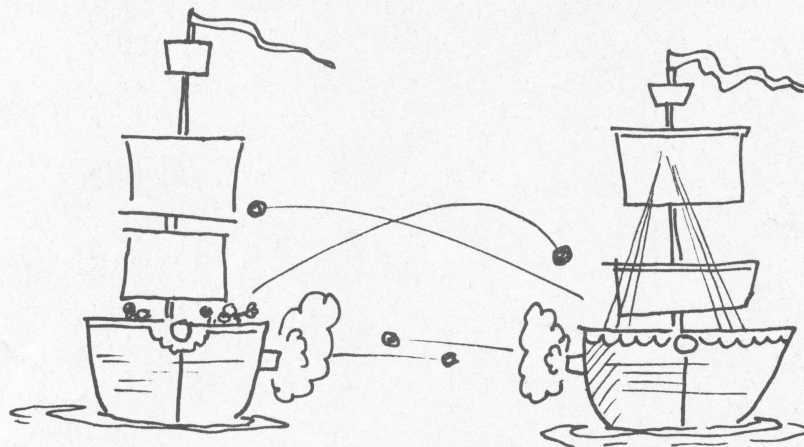

Question: "Nino, actually who are....."

(Editor's note) We were forced to end the interview here, because the OC wrote Nino and the reporter up for being out of room after taps with a light on.
